DeepGuard AI — Forensic Authenticity Certificate

Automated Media Analysis using Vision Transformer (ViT) Multi-Head Self-Attention

---

OFFICIAL VERDICT: REAL

CONFIDENCE: 84.7%

Risk Level: LOW

Media & Inspection Metadata

Scan ID	scan-img-e24ad56c	**Media Type**	IMAGE
Target File	test_portrait.jpg	**Timestamp**	2026-09-12 16:43:56 UTC
Model Name	dima806/deepfake_vs_real_image_detection	**Provider**	Huggingface
Inference Time	220 ms	**Frames Analyzed**	1 (0 suspicious)
Real Probability	84.72%	**Fake Probability**	15.28%

Explainable AI (XAI) Synthesis

The model identified continuous facial boundary transitions, consistent specular reflections, and authentic skin micro-textures.

- Natural corneal reflection symmetry detected across pupils
- Continuous skin pore density without GAN smoothing artifacts
- Absence of perimeter blending seams around the facial mask boundary

---

LEGAL & SCIENTIFIC NOTICE: Deepfake detection is an active field of computational forensics. DeepGuard AI outputs represent model-inferred statistical confidence and attention anomalies. Results should be evaluated alongside secondary contextual corroboration and should not be used as sole evidence in judicial proceedings.
